

Sunnoo's Electric Vehicle Charging Station / Adaptive Power Unit

addresses the growing obstacle to purchasing electric vehicles – "range anxiety" – while reducing the global reliance on fossil fuels to power otherwise eco-friendly transportation solutions.

NO PERMITTING MEANS INSTANT IMPLEMENTATION

While permitting can take 18 to 24 months in many places, Sunnoo's system requires no permits as it is entirely self-contained. That **means it's ready to start charging vehicles within 90-seconds of delivery.**

THE NEW INDUSTRY STANDARD

Our patented turret system is **50-62% more efficient than any other system on the market.**

GREATER ENERGY CAPTURE MEANS FASTER ROI

Our proprietary tracking software efficiently follows the sun throughout the day **capturing 8 to 12% more energy per day** while expending exceptionally little to power the motor.

REFRACTED BI-FACIAL PANEL SYSTEM MEANS MORE POWER

Refractor distance, material, and diffusion **angles increase white light to rear of panel to boost production of power.** Reducing shadow and shade abnormalities at rear of bi-facial panels aide in enhanced power capture.
