

LIMITLESS Grow-Wall™

We believe:

Solar energy and fresh vegetables should be accessible to everyone.

Solar-powered structures for growing vegetables can open up new opportunities for agricultural jobs and farmworker housing.

Our solution:

The LIMITLESS Grow-Wall™ leverages the power of American-Made PV Solar Panels by integrating them into a Buy-American DIY kit for growing fresh vegetables anywhere.

By keeping the structures small, there's no need for a building permit.

By making the solar plug-and-play, installation costs are saved.

Reducing the cost and complexity of solar and selling the panels as part of a value-added kit rather than a stand-alone commodity will help drive adoption of American-Made solar panels.
