

# CCA CDG Opt-out LMI Software

PowerMarket

**We are developing a software implementation solution for next generation solar policy frameworks like CCA CDG Opt-out and others that will help further reduce acquisition and management soft costs.**

## **Problem**

As community solar matures it's beginning to show diminishing returns from an installed \$/watt perspective. There are new regulatory frameworks like CCA CDG Opt-out that can substantially reduce the \$/watt cost of installed solar, however, there aren't any software solutions to promote the implementation of those frameworks within communities.

## **Solution**

PowerMarket is intending to engage municipalities and the CCA industry with new software solutions that would help them not only manage but win approval of more CCA / municipal based community solar. The American-Made Solar Prize Software Track could help us not just with funding, but also the promotion of our effort.
