

Opening up 200 GW of commercial and industrial (C&I) rooftop solar potential

C&I rooftops have enormous potential for PV electricity generation

However, the weight of traditional PV solutions is holding back growth of this segment

We propose to solve this with the “PV Roof Sheet” a lightweight PV system solution designed for simple low-cost mounting—

Enables a 1 psf PV system, about 1/3 traditional system weight

Initial application will be to lightweight metal rooftops, which are significantly load limited

A 40-60 gigawatt potential market in N. America
