

## Laterally Symmetric Level-3 Engine

Bridgelux's Level-3 Engine Family is designed as a stand-alone light source for non-aesthetic, hidden applications (such as undercabinet lighting.)

Perfect as an engine in semi-indirect luminaires, the use of on-board optics precludes any needs for additional secondary optics such as a diffuser or batwing optic. High efficacy and lateral symmetry assures wider spacing, lower application power density, better uniformity on both the ceiling and the work plane. Plug and Play capabilities and guaranteed efficacy of over 160 lpw make luminaire configuration simple.

In addition, Bridgelux's novel phosphor mix matches the spectrum of natural light, which assures benefits to human health.
