Jose Arias

- I as Director of the Inclusive Energies in Disadvantaged Areas project.
- To successfully fulfill this important task, not only teams are required but also social responsibilities must be included, committing to respect and comply with the rules of order and discipline for the care of the environment and its surroundings.

Xenia Arias

- It is responsible for the implementation of innovation of equipment for domestic use such as; gravity, sports equipment such as bicycles, beds, regales, (taking advantage of these small amounts of energy for some equipment) steam and others such as biomass, it is also in charge of carrying out all the changes to improve the environment by improving the exterior with planting trees, garbage cans, taking care of plants and bushes enhance the image of the place

Eduardo Lopez

- It is dedicated to helping to find new alternatives that are economical and functional, seeking the best performance and effectiveness, it works to locate some proposals for improvements in the equipment.
- Training and giving knowledge of the application of the new inclusive energies influence each one in the responsibility and compliance with the rules and conservation of the good condition of the equipment and the environment, how to make the best use of it, a contract will be signed being aware of their obligations.
- It is important to consider the good relationship that must exist in the community that will be the beneficiary of such an important project.

Jose L. Arias

- It has the task of working program of the quantities of the communities settled there, to have all their personal and family information, to prepare work teams for the maintenance of the equipment and machines, their operation and use for a good result and energy savings. Include courses and presentations on each of the important topics on each of the topics considered very necessary such as; inclusive energy, health, environment, education for children, family environment, nutrition, cleaning, care of resources, etc.
